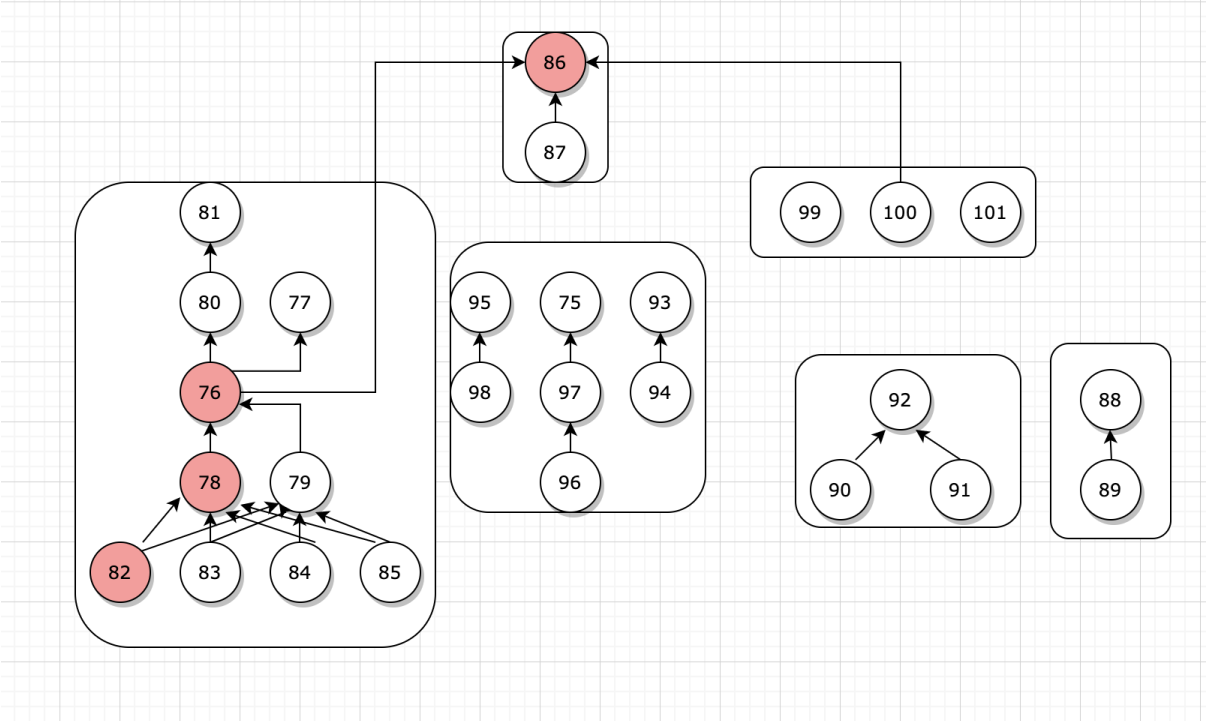
Sprint3 Schedule

task id	time estimate	subtask id	task description	dependencies	critical path
FIT-45	20	FIT-75	achievement assets		
		FIT-93	backend for profile picture uploading		
		FIT-94	frontend for profiel picture	93	
		FIT-95	user object initialization		
		FIT-96	frontend for achievement assets	97	
		FIT-97	backend for achievement assets	75	
		FIT-98	frontend for updating user data	95	
FIT-72	16	FIT-90	displlay users' progess/goals		
		FIT-91	progress/goals tracking button		
		FIT-92	display user data	90,91	
FIT-73	20	FIT-99	TDEE calculation		
		FIT-100	set caloric budget	86	
		FIT-101	assign themes for pages		
FIT-71	30	FIT-76	create page - exercise plan page	80	*
		FIT-77	update Schema - Sets		
		FIT-78	Create Page - Create workout day	76	*
		FIT-79	Create Pages - Add/Update Exercises	76	
		FIT-80	Backend - Create workout plan schema & routers	81	
		FIT-81	Backend - Create workout schema & routers		
		FIT-82	Update Page - Calendar Page	78,79	*
		FIT-83	Update User Schema	78,79	
		FIT-84	Update Page - Exercise Log	78,79	
		FIT-85	Update Logic - Exercise Log	78,79	
FIT-40	16	FIT-88	cretse customized exercise		
		FIT-89	search customized exercise	88	
FIT-74	4	FIT-86	setting screens		*
		FIT-87	navigation	86	



We worked on 6 tasks in sprint3. The table shows task details (task id, time estimate, subtask, task description, whether belongs to critical path); the diagram illustrates task dependencies. The critical path (highlighted) consists of tasks 86, 76, 78, 82.

To keep the sprint in schedule, firstly, we tried selecting tasks that are independent of each other to work on. For tasks with dependencies, in this case, FIT71(calendar view) and FIT73 (TDEE calculation) are linked to the setting page, FIT74. FIT74 is marked as high priority and finished early.
