

Sprint 4 Burndown Chart

The above screenshot represents the burndown chart of our group in Sprint 4. The planned velocity still differs from the actual velocity. Also, compared to the previous sprint (Sprint 3), curve has also deviated a bit more this time. On top of that, the velocity from Sprint 4 has also decreased slightly from Sprint 3. To be fair, Sprint 3 was the best performing sprint throughout the entire project. In fact, the sprint velocity of Sprint 4 was actually almost the same as Sprint 2. One of the reasons for this, could also be that the user stories towards the end (Sprint 4) are also more complex, taking up more time than members had intended. Therefore, there are user stories that were not fully completed.
